

High-quality Fullerene and Fullerenols up to kilogram scale

Matexcel provides materials and services for worldwide researchers in academia and industry. Fullerene could be widely applied in cosmetics, pharmaceutical intermediates, composite materials, additives, and other areas, due to its structure, superconducting, efficient adsorption characteristics of embedded molecules, and other excellent chemical/physical properties.

We provide high-quality fullerene in different purity and up to kilogram scale. For the poorly soluble fullerene, we also provide fullerenols, with solubility reaching 5g/100ml in water.

Cat.No.	Product Name
GRA-326	C60
GRA-328	Fullerenols(-OH functional fullerene)

If you have any questions or interest in our fullerene products, please feel free to contact us.
